GitHub: github.com/vdeverkonda

Skills and Certifications: Python, SQL, NoSql, React, NodeJS, Apache Spark, Kafka, AWS/Azure/GCP Infrastructure, AWS (S3, RDS, DynamoDB, Glue, Redshift), Docker, CI/CD, dbt, AWS CLF-C01 Certified, A11ly, Snowflake, Power BI, Data Science, WebNY, WCAG, Drupal.

Education
Master of Science in Data Science, State University of New York (SUNY) at Albany | 2024 – 26
Bachelor of Technology in Computer Science and Engineering, CMR Institute of Technology, India | 2019 – 23

Work History

New York State Department of Labor, UX/Data Analyst | Oct 2025 – May 2026

- **Engineered** custom, in-house automation tools that bypassed traditional IT bottlenecks, saving over **20 hours** of manual labor per week; solutions were subsequently adopted as best-practice standards for future development.
- **Designed** intuitive user journeys and workflow-based navigation models to streamline digital access for **(MAU) 800,000+ active users**, establishing UX frameworks that became official reference standards for multiple teams.
- **Drove** website performance and engagement for a platform supporting 770,000+ active users by performing structured SWOT analysis and implementing scalable, data-driven, and cost-neutral improvements.
- **Streamlined** cross-functional workflows and content production by partnering directly with 5+ program SMEs, directors, and managers to translate complex departmental programs into accessible, user-friendly digital campaigns.
- Consistently delivered high-quality results by pairing strong independent execution with a commitment to continuous growth, actively leveraging candid feedback and constructive critique to refine solutions and align with overarching team goals.

Cognizant, Telangana, India, SDTM Programmer & Subject Matter Expert | Mar 2023 – Jul 2024

- Increased clinical trial data processing capacity by 60% and improved team productivity by 33% through workflow automation and process optimization.
- Ensured 100% CDISC SDTM compliance across multiple clinical studies and data pipelines by developing Python and SQL-based data validation and transformation processes.
- Upskilled 50+ engineers by designing and delivering 40+ hours of AWS training covering cloud architecture, data services, and security practices.

Portfolio

- **Medical AI Diagnostics System:** Achieved 93.91% validation accuracy in pneumonia detection by developing an ensemble deep learning model combining MobileNetV2, DenseNet121, and Vision Transformer. Built reproducible training and inference workflows using Python, TensorFlow, and OpenCV. In use by underdeveloped areas
- **Collaborative AI Trip Planner:** Enabled real-time collaboration and budget tracking by developing a full-stack application with AI-powered itinerary generation using the Gemini API, Node.js, and MongoDB, React.
- **Machine Learning Optimization Study:** Evaluated convergence speed, stability, and computational efficiency by implementing and comparing Gradient Descent, SGD, Newton's Method, and BFGS for logistic regression.
- **Working Families Hub and Immigrant Labor Hubs**: Leveraged UX principles I learned in my internship to drive high impact changes to existing content. Resulting in core user journey flows that are still being used.
